10X GC® ITALY

- Unique HVAC Technology
- Return on investment less than one year
- Green technology / reducing carbon footprint

SUSTAINABLE DEVELOPMENT GOALS

H&V news AWARDS 2022 — HEADLINE SPONSOR WOLSELEY PIPE — WINNER — Best Commercial HVAC Technology

rac COOLING INDUSTRY AWARDS 2022 — HEADLINE SPONSOR WOLSELEY CLIMATE — FINALIST

INSTALLATION

Catalyst® is easy to install by an HVAC technician without disrupting system operation and is compatible with all major refrigerants and HVAC/cooling systems.

LIFESPAN

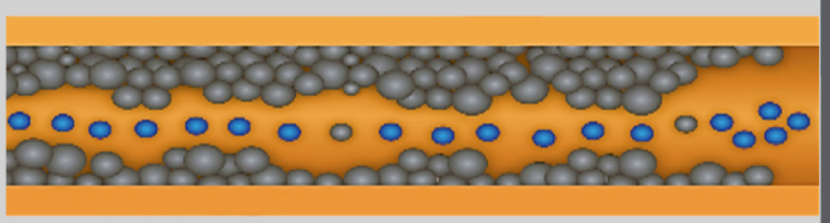

Catalyst® is a one-time installation on AC units and only needs a booster charge in refrigerators after 8 - 10 years.

OIL CONTAMINATION

The compressor oil moves throughout the system with the refrigerant. Oil molecules adhere to the coils and hoses which reduces the heat transfer. ASHRAE says that oil contamination can reduce system efficiency by 30+%.

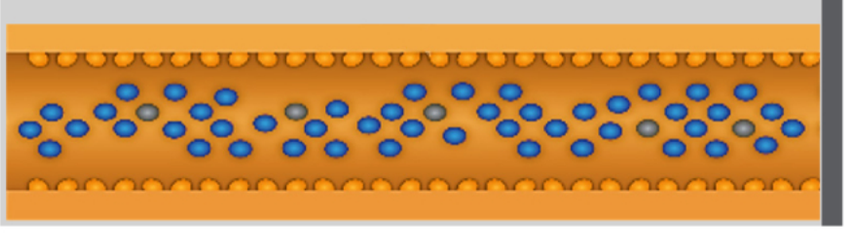

BEFORE

Oil molecules adhere to coils. and hoses which reduces heat transfer and efficiency.

AFTER

Oil pollution molecules on the the coils and pipes are reduced after the installation of Catalyst® which restores the system's heat transfer and efficiency.

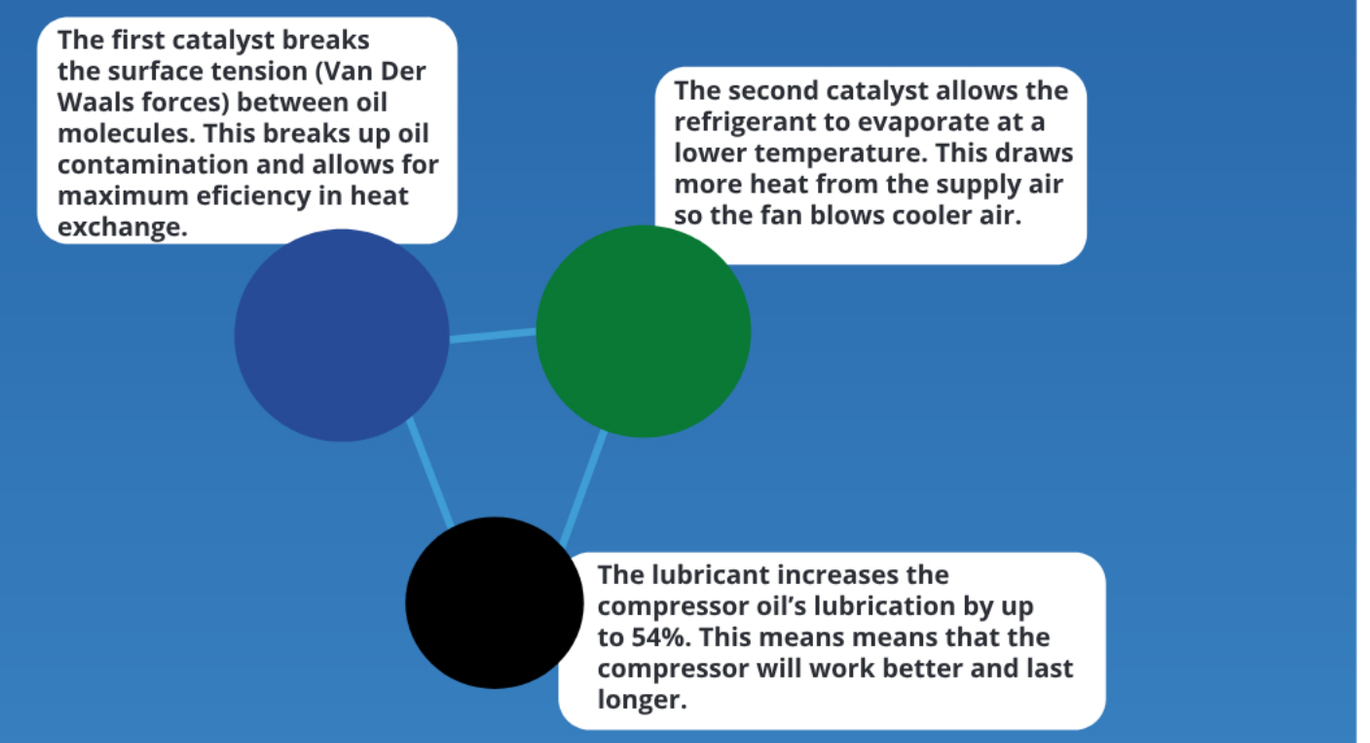

What is it?

Catalyst® is a synthetic catalyst technology that enables HVAC systems to work more efficiently. It has been proven to save customers an average of 20+% in energy costs by reducing electricity consumption.

How does it work?

Catalyst® contains two synthetic catalysts and a lubricant that enables HVAC and cooling systems to run at their maximum capacity.

AUTOMOTIVE COMMERCIAL/INDUSTRIAL RESIDENTIAL

Reduces energy costs and emissions

Catalyst® enables the air conditioner to reach the set temperature faster by supplying cooler air. Shorter running times mean that it uses less electricity/kWh, which results in lower electricity costs and a reduced carbon footprint.

A 20+% reduction in run time will lower maintenance costs and extend the life of the equipment. Installing Catalyst® does not invalidate the manufacturer's warranty.
